LETTER OF RECOMMENDATION

It brings me great pleasure to provide this recommendation for **Mr. Tata Sai Kiran**, who aspires to enroll in your university's master's programme. I've known Sai Kiran for more than four years as his lecturer. I had the chance to watch him while he was earning his bachelor's degree as I am the **Head of the Department of Electrical and Electronics Engineering**.

Mr. Tata Sai Kiran took my **Electrical and Electronic Instruments** classes. He completed a major project under my supervision in the 2020–21 academic year. The project is entitled **Design and Development of Hybrid Energy Storage System for Electric Vehicles**. I would like to emphasize that he is a serious student who gives his academics his whole attention and works to get better. In comparison to his contemporaries, he has a favourable attitude toward learning and is curious.

He has demonstrated a strong interest in learning from hands-on projects and methods throughout his time at our institute. His lab work was precise and completed on time as well. He was able to do each experiment with ease and well manage his time. His presentations in class demonstrated his aptitude for problem-solving and communication as he broke down complicated ideas into understandable language.

I have every confidence that Mr. Tata Sai Kiran will demonstrate his value to your institute and meet all the criteria required of a prospective student. He is capable of working both independently and in a group effectively and efficiently. He would make a fantastic research assistant and I have no doubt that he will put up a lot of effort to make the study a success. As a result, I heartily advise he pursue graduate studies at your university with all the appropriate financial help. I hope he is successful in all of his future undertakings.

Yours Sincerely

V Vinay Kumar
